

**TNFSF18/GITRL Paradox: Co-stimulatory Ligand Upregulated in Immune-Cold NRF2-High OSCC**

TNFSF18 (GITRL) is the ligand for GITR, a Treg co-stimulatory receptor.  
Novel hypothesis: tumour-intrinsic GITRL promotes Treg expansion rather than effector T-cell activation — previously unreported in any cancer type.  
NRF2-High OSCC: TNFSF18 LFC = +2.46, padj = 7.2×10.<sup>2º</sup>
